

# PUPPY FORMULA RECIPE

FOR MAXIMUM HEALTH AND NUTRITION

- **2 Cans of Evaporated Whole Goat Milk.** I use Meyenberg Evaporated Goat Milk.
- **2 Raw Egg Yolks.**
- **2 Cups of Plain Yogurt.** I use Dannon's regular plain yogurt which isn't low-fat.
- **1 TSP Karo Syrup (Corn Syrup).** I use the Karo Light Syrup.

Put contents into a blender and set on the lowest level to blend. It doesn't have to be blended very long and it's best to avoid creating too many bubbles or foamy top.

Place contents into a container and keep refrigerated.

Fill an 8 oz. baby bottle (we use Dr. Brown Bottles with newborn nipples) with formula and heat to 100-105 degrees. You can also place the baby bottle (open, without the nipple) in the microwave and set for 30-40 seconds. It's always best to test the temperature by dripping a few drops on your wrist. It should feel warm not hot.

Feed each puppy until they are full. They will spit the nipple out of their mouth when they are done. Using a cotton ball and warm water; pee and poop each puppy after every meal.
